Course Code: CSE-S208 Breakup: 3-0-3-5

Course Name: Data Structure Using Python

Course outcomes (CO): At the end of the course, the student will be able to:

CO1	Differentiate static and dynamic memory allocation techniques
CO2	Implement various operations on linear and non-linear data structures
CO3	Analyze and implement different searching and sorting techniques
CO4	Identity the appropriate data structure to solve a given problem
CO5	Compute time complexities of different algorithms

Course Details:

Informal introduction to programmin, algorithms and data structures viaged, Downloading and installing Python, ged in Python: variables, operations, control flow - assignments, condition-als, loops, functions, Python: types, expressions, strings, lists, tuples, Python memory model: names, mutable and immutable values, List operations: slices etc Binary search, Inductive function denitions: numerical and structural induction, Elementary inductive sorting: selection and insertion sort, In-place sorting

Basic algorithmic analysis: input size, asymptotic complexity, O() notation, Arrays vs lists, Merge sort, Quicksort, Stable sorting, Dictionaries, More on Python functions: optional arguments, default values, Passing functions as arguments, Higher order functions on lists; map, Iter, list comprehension

Exception handling, Basic input/output, Handling files, String processing, Backtracking: N Queens, recording all solutions, Scope in Python: local, global, nonlocal names, Nested functions, Data structures: stack, queue, Heaps.

Abstract datatypes, Classes and objects in Python, "Linked" lists: find, insert, delete, Binary search trees: find, insert, delete, Height-balanced binary search trees, Effcient evaluation of recursive denitions: memorization, Dynamic programming: examples, Other programming languages: C and manual memory management, Other programming paradigms: functional programming

Data Structures Lab

Write Program in Python for following:

- 1. Array implementation of Stack, Queue, Circular Queue
- 2. Linked list implementation using Dynamic memory Allocation, deletions and insertions, Linked Implementation of Stack, Queue, Circular Queue
- 3. Implementation of Tree Structures, Binary Tree, Tree Traversals, Binary Search Tree, Insertion and Deletion in BST, Simple implementation of Multiway search trees
- 4. Implementation of Searching and Sorting Algorithms
- 5. Graph Implementation, BFS, DFS.
